

Flow-tools Tutorial

SANOG 6

Bhutan

Agenda

- Network flows
- Cisco / Juniper implementation – NetFlow
- Cisco / Juniper Configuration
- flow-tools programs overview and examples from Abilene and Ohio-Gigapop

Network Flows

- Packets or frames that have a common attribute.
- Creation and expiration policy – what conditions start and stop a flow.
- Counters – packets, bytes, time.
- Routing information – AS, network mask, interfaces.

Network Flows

- Unidirectional or bidirectional.
- Bidirectional flows can contain other information such as round trip time, TCP behavior.
- Application flows look past the headers to classify packets by their contents.
- Aggregated flows – flows of flows.

Unidirectional Flow with Source/Destination IP Key

Active Flows

Flow	Source IP	Destination IP
1	10.0.0.1	10.0.0.2
2	10.0.0.2	10.0.0.1

Unidirectional Flow with Source/Destination IP Key

Active Flows

Flow	Source IP	Destination IP
1	10.0.0.1	10.0.0.2
2	10.0.0.2	10.0.0.1

Unidirectional Flow with IP, Port, Protocol Key

Active Flows

Flow	Source IP	Destination IP	prot	srcPort	dstPort
1	10.0.0.1	10.0.0.2	TCP	32000	23
2	10.0.0.2	10.0.0.1	TCP	23	32000
3	10.0.0.1	10.0.0.2	ICMP	0	0
4	10.0.0.2	10.0.0.1	ICMP	0	0

Bidirectional Flow with IP, Port, Protocol Key

Active Flows

Flow	Source IP	Destination IP	prot	srcPort	dstPort
1	10.0.0.1	10.0.0.2	TCP	32000	23
2	10.0.0.1	10.0.0.2	ICMP	0	0

Application Flow

Active Flows

Flow	Source IP	Destination IP	Application
1	10.0.0.1	10.0.0.2	HTTP

Aggregated Flow

Main Active flow table

Flow	Source IP	Destination IP	prot	srcPort	dstPort
1	10.0.0.1	10.0.0.2	TCP	32000	23
2	10.0.0.2	10.0.0.1	TCP	23	32000
3	10.0.0.1	10.0.0.2	ICMP	0	0
4	10.0.0.2	10.0.0.1	ICMP	0	0

Source/Destination IP Aggregate

Flow	Source IP	Destination IP
1	10.0.0.1	10.0.0.2
2	10.0.0.2	10.0.0.1

Flow Descriptors

- A Key with more elements will generate more flows.
- Greater number of flows leads to more post processing time to generate reports, more memory and CPU requirements for device generating flows.
- Depends on application. Traffic engineering vs. intrusion detection.

Flow Accounting

- Accounting information accumulated with flows.
- Packets, Bytes, Start Time, End Time.
- Network routing information – masks and autonomous system number.

Flow Collection

- Passive monitor.
- Router other existing network device.

Passive Monitor Collection

Router Collection

Flow collector
stores exported flows from router.

Passive Monitor

- Directly connected to a LAN segment via a switch port in “mirror” mode, optical splitter, or repeated segment.
- Generate flows for all local LAN traffic.
- Must have an interface or monitor deployed on each LAN segment.
- Support for more detailed flows – bidirectional and application.

Router Collection

- Router will generate flows for traffic that is directed to the router.
- Flows are not generated for local LAN traffic.
- Limited to “simple” flow criteria (packet headers).
- Generally easier to deploy – no new equipment.

Cisco NetFlow

- Unidirectional flows.
- IPv4 unicast and multicast.
- Aggregated and unaggregated.
- Flows exported via UDP.
- Supported on IOS and CatIOS platforms.
- Catalyst NetFlow is different implementation.

Cisco NetFlow Versions

- 4 Unaggregated types (1,5,6,7).
- 14 Aggregated types (8.x).
- Each version has its own packet format.
- Version 1 does not have sequence numbers – no way to detect lost flows.
- The “version” defines what type of data is in the flow.
- Some versions specific to Catalyst platform.

NetFlow v1

- Key fields: Source/Destination IP, Source/Destination Port, IP Protocol, ToS, Input interface.
- Accounting: Packets, Octets, Start/End time, Output interface
- Other: Bitwise OR of TCP flags.

NetFlow v5

- Key fields: Source/Destination IP, Source/Destination Port, IP Protocol, ToS, Input interface.
- Accounting: Packets, Octets, Start/End time, Output interface.
- Other: Bitwise OR of TCP flags, Source/Destination AS and IP Mask.
- Packet format adds sequence numbers for detecting lost exports.

NetFlow v8

- Aggregated v5 flows.
- 3 Catalyst 65xx specific that correspond to the configurable flow mask.
- Much less data to post process, but lose fine granularity of v5 – no IP addresses.

NetFlow v8

- AS
- Protocol/Port
- Source Prefix
- Destination Prefix
- Prefix
- Destination (Catalyst 65xx)
- Source/Destination (Catalyst 65xx)
- Full Flow (Catalyst 65xx)

NetFlow v8

- ToS/AS
- ToS/Protocol/Port
- ToS/Source Prefix
- ToS/Destination Prefix
- Tos/Source/Destination Prefix
- ToS/Prefix/Port

NetFlow Packet Format

- Common header among export versions.
- All but v1 have a sequence number.
- Version specific data field where N records of data type are exported.
- N is determined by the size of the flow definition. Packet size is kept under ~1480 bytes. No fragmentation on Ethernet.

NetFlow v5 Packet Example

NetFlow v5 Packet (Header)

```
struct ftpdu_v5 {
    /* 24 byte header */
    u_int16 version;          /* 5 */
    u_int16 count;           /* The number of records in the PDU */
    u_int32 sysUpTime;       /* Current time in millisecs since router booted */
    u_int32 unix_secs;       /* Current seconds since 0000 UTC 1970 */
    u_int32 unix_nsecs;     /* Residual nanoseconds since 0000 UTC 1970 */
    u_int32 flow_sequence;  /* Seq counter of total flows seen */
    u_int8  engine_type;    /* Type of flow switching engine (RP,VIP,etc.) */
    u_int8  engine_id;     /* Slot number of the flow switching engine */
    u_int16 reserved;
```

NetFlow v5 Packet (Records)

```
/* 48 byte payload */
struct ftrec_v5 {
    u_int32 srcaddr;      /* Source IP Address */
    u_int32 dstaddr;     /* Destination IP Address */
    u_int32 nexthop;     /* Next hop router's IP Address */
    u_int16 input;       /* Input interface index */
    u_int16 output;     /* Output interface index */
    u_int32 dPkts;       /* Packets sent in Duration */
    u_int32 dOctets;     /* Octets sent in Duration. */
    u_int32 First;       /* SysUptime at start of flow */
    u_int32 Last;        /* and of last packet of flow */
    u_int16 srcport;     /* TCP/UDP source port number or equivalent */
    u_int16 dstport;     /* TCP/UDP destination port number or equiv */
    u_int8  pad;
    u_int8  tcp_flags;  /* Cumulative OR of tcp flags */
    u_int8  prot;       /* IP protocol, e.g., 6=TCP, 17=UDP, ... */
    u_int8  tos;        /* IP Type-of-Service */
    u_int16 src_as;     /* originating AS of source address */
    u_int16 dst_as;     /* originating AS of destination address */
    u_int8  src_mask;   /* source address prefix mask bits */
    u_int8  dst_mask;   /* destination address prefix mask bits */
    u_int16 drops;
} records[FT_PDU_V5_MAXFLOWS];
};
```

NetFlow v8 Packet Example (AS Aggregation)

NetFlow v8 AS agg. Packet

```
struct ftpdu_v8_1 {
    /* 28 byte header */
    u_int16 version;          /* 8 */
    u_int16 count;           /* The number of records in the PDU */
    u_int32 sysUpTime;       /* Current time in millisecs since router booted */
    u_int32 unix_secs;       /* Current seconds since 0000 UTC 1970 */
    u_int32 unix_nsecs;      /* Residual nanoseconds since 0000 UTC 1970 */
    u_int32 flow_sequence;   /* Seq counter of total flows seen */
    u_int8  engine_type;     /* Type of flow switching engine (RP,VIP,etc.) */
    u_int8  engine_id;       /* Slot number of the flow switching engine */
    u_int8  aggregation;     /* Aggregation method being used */
    u_int8  agg_version;     /* Version of the aggregation export */
    u_int32 reserved;
    /* 28 byte payload */
    struct ftrec_v8_1 {
        u_int32 dFlows;      /* Number of flows */
        u_int32 dPkts;       /* Packets sent in duration */
        u_int32 dOctets;     /* Octets sent in duration */
        u_int32 First;       /* SysUpTime at start of flow */
        u_int32 Last;        /* and of last packet of flow */
        u_int16 src_as;      /* originating AS of source address */
        u_int16 dst_as;      /* originating AS of destination address */
        u_int16 input;       /* input interface index */
        u_int16 output;      /* output interface index */
    } records[FT_PDU_V8_1_MAXFLOWS];
};
```

Cisco IOS Configuration

- Configured on each input interface.
- Define the version.
- Define the IP address of the collector (where to send the flows).
- Optionally enable aggregation tables.
- Optionally configure flow timeout and main (v5) flow table size.
- Optionally configure sample rate.

Cisco IOS Configuration

```
interface FastEthernet0/0/0
  ip address 10.0.0.1 255.255.255.0
  no ip directed-broadcast
  ip route-cache flow

interface ATM1/0/0
  no ip address
  no ip directed-broadcast
  ip route-cache flow

interface Loopback0
  ip address 10.10.10.10 255.255.255.255
  no ip directed-broadcast

ip flow-export version 5 origin-as
ip flow-export destination 10.0.0.10 5004
ip flow-export source loopback 0

ip flow-aggregation cache prefix
  export destination 10.0.0.10 5555
  enabled
```

Cisco IOS Configuration

```
krc4#sh ip flow export
Flow export is enabled
  Exporting flows to 10.0.0.10 (5004)
  Exporting using source IP address 10.10.10.10
  Version 5 flow records, origin-as
  Cache for prefix aggregation:
    Exporting flows to 10.0.0.10 (5555)
    Exporting using source IP address 10.10.10.10
3176848179 flows exported in 105898459 udp datagrams
0 flows failed due to lack of export packet
45 export packets were sent up to process level
0 export packets were punted to the RP
5 export packets were dropped due to no fib
31 export packets were dropped due to adjacency issues
0 export packets were dropped due to fragmentation failures
0 export packets were dropped due to encapsulation fixup failures
0 export packets were dropped enqueueing for the RP
0 export packets were dropped due to IPC rate limiting
0 export packets were dropped due to output drops
```

Cisco IOS Configuration

```
krc4#sho ip ca fl
```

```
IP packet size distribution (106519M total packets):
```

```
  1-32   64   96  128  160  192  224  256  288  320  352  384  416  448  480

Juniper Configuration

- Sample packets with firewall filter and forward to routing engine.
- Sampling rate is limited to 7000pps. Fine for traffic engineering, but restrictive for DoS and intrusion detection.
- Juniper calls NetFlow cflowd.

Juniper Configuration

Firewall filter

```
firewall {
  filter all {
    term all {
      then {
        sample;
        accept;
      }
    }
  }
}
```

Enable sampling / flows

```
forwarding-options {
  sampling {
    input {
      family inet {
        rate 100;
      }
    }
    output {
      cflowd 10.0.0.16 {
        port 2055;
        version 5;
      }
    }
  }
}
```

Juniper Configuration

Apply firewall filter to each interface.

```
interfaces {
  ge-0/3/0 {
    unit 0 {
      family inet {
        filter {
          input all;
          output all;
        }
        address 192.148.244.1/24;
      }
    }
  }
}
```

Flow-tools

- Collection of programs to post process Cisco NetFlow compatible flows.
- Written in C, designed to be fast (scales to large installations).
- Includes library (ftlib) for custom applications.
- Installation with `configure;make;make install` on most platforms (FreeBSD, Linux, Solaris, BSDi, NetBSD).

flow-capture

- Collect NetFlow exports and stores to disk.
- Built in compression.
- Manages disk space by expiring older flow files at configurable limits.
- Detects lost flows by missing sequence numbers and stores with flow metadata.

flow-fanout

- Replicate NetFlow UDP streams from one source to many destinations.
- Destination may be a multicast address.

flow-expire

- Expire (remove) old flow files based on disk usage.
- Same functionality built in to flow-capture.
- Used when managing disk space in a distributed environment.

Collector Placement and configuration

- NetFlow is UDP so the collector should ideally be directly connected to the router to minimize packet loss and IP spoofing risks.
- No flow control. Undersized collector will drop flows. Monitor `netstat -s | grep buf` and configure syslog so dropped flows will be logged.

flow-print

- Formatted output of flow files.

```
eng1:% flow-print < ft-v05.2002-01-21.093345-0500 | head -15
srcIP          dstIP          prot  srcPort  dstPort  octets  packets
131.238.205.199 194.210.13.1   6     6346    40355   221     5

```

flow-cat

- Concat many flow files or directories of files.

```
eng1:% ls
```

```
ft-v05.2002-01-21.160001-0500    ft-v05.2002-01-21.170001-0500

132.235.170.19	152.30.96.188	6	6346	1475	128	3

flow-merge

- Flow-merge is similar to flow-cat except it maintains relative ordering of flows when combining the files.
- Typically used when combining flows from multiple collectors.

flow-filter

- Filter flows based on port, protocol, ASN, IP address, ToS bits, TCP bits, and tags.

```
eng1% flow-cat . | flow-filter -P119 | flow-print | head -10
```

srcIP	dstIP	prot	srcPort	dstPort	octets	packets
155.52.46.50	164.107.115.4	6	33225	119	114	2
128.223.220.29	129.137.4.135	6	52745	119	1438382	1022
155.52.46.50	164.107.115.4	6	33225	119	374	6
164.107.115.4	192.58.107.160	6	60141	119	5147961	8876
128.223.220.29	129.137.4.135	6	52745	119	1356325	965
128.223.220.29	129.137.4.135	6	52714	119	561016	398
130.207.244.18	129.22.8.64	6	36033	119	30194	121
155.52.46.50	164.107.115.4	6	33225	119	130	2
198.108.1.146	129.137.4.135	6	17800	119	210720652	216072

flow-split

- Split flow files into smaller files.
- Typically used with flow-stat and graphing. For example if flow files are 1 hour and want 5 minute data points in graph, flow-split can take the 1 hour flow files and generate 5 minute files.

flow-tag

- Adds a tag field to flows based on IP exporter, IP prefix, Autonomous System, or next hop.
- Like flow-filter used with other tools.
- Used to manage groups of prefixes or ASN's.

flow-header

- Display meta information in flow file.

```
eng1:% flow-header < ft-v05.2002-01-21.093345-0500
#
# mode:                normal
# capture hostname:    eng1.oar.net
# exporter IP address: 0.0.0.0
# capture start:       Mon Jan 21 09:33:45 2002
# capture end:         Mon Jan 21 09:45:01 2002
# capture period:      676 seconds
# compress:            on
# byte order:          little
# stream version:      3
# export version:      5
# lost flows:          0
# corrupt packets:     0
# sequencer resets:    0
# capture flows:       341370
#
```

flow-stat

- Generates reports from flow files.
- Output is readable and easily imported into graphing programs (gnuplot, etc).
- IP Address, IP address pairs, ports, packets, bytes, interfaces, next hop, Autonomous System, ToS bits, exporter, and tags.

flow-stat - summary

Total Flows	:	24236730
Total Octets	:	71266806610
Total Packets	:	109298006

flow-dscan

- DoS detection / network scanning tool.
- Flag hosts which have flows to many other hosts.
- Flag hosts which are using a large number of TCP/UDP ports.
- Works better on smaller networks or with flow-filter to limit traffic. For example filter TCP port 25 to detect hosts infected with e-mail worm.

flow-gen

- Debugging tool to generate flows.

```
eng1:% flow-gen -V8.1 | flow-print | head -10
```

srcAS	dstAS	in	out	flows	octets	packets	duration
0	65280	0	65280	2	1	1	4294901760
1	65281	1	65281	4	2	2	4294901760

3	65283	3	65283	8	4	4	4294901760
4	65284	4	65284	10	5	5	4294901760
5	65285	5	65285	12	6	6	4294901760
6	65286	6	65286	14	7	7	4294901760
7	65287	7	65287	16	8	8	4294901760
8	65288	8	65288	18	9	9	4294901760

flow-send

- Transmit flow files with NetFlow protocol to another collector.
- Can be used to take flow-tools files and send them to other NetFlow compatible collector.

flow-receive

- Like flow-capture but does not manage disk space. Output is to standard out and can be used directly with other flow-tools programs.
- Typically used for debugging.

```
eng1:% flow-receive 0/0/5555 | flow-print
flow-receive: New exporter: time=1011652474 src_ip=199.18.112.114
dst_ip=199.18.97.102 d_version=8
srcPrefix      srcAS  dstPrefix      dstAS  input  output  flows
143.105/16     600    128.9/16       4      48     25     1
140.141/16     600    150.216/16     81     48     25     4
132.235/16     17135  130.49/17      4130   38     25     25
131.123/16     11050  129.59/16     7212   42     25     1
206.21/16      600    128.239/16    11975  48     25     2
199.218/16     600    128.255/16    3676   48     25     1
```

flow-import

- Import flows from other formats into flow-tools.
- Currently supports ASCII and cflowd formats.

flow-export

- Export flows from flow-tools files to other formats.
- Currently supports ASCII and cflowd formats.
- ASCII output can be used with perl or other scripting languages (with a performance penalty).

flow-xlate

- Translate flows among NetFlow versions.
- Originally intended for use with Catalyst switches since they export some flows in version 7 and others in version 5 format.
